

THE FIRST CLEANSER SCIENTIFICALLY FORMULATED FOR OPTIMUM FEMININE HYGIENE

Performance.

The brilliant minds behind the development of DS Laboratories products create today what becomes the standard of tomorrow. For a decade, DS Laboratories has pioneered precisely such exceptional formulations, not just variations on the familiar.

Today we advance the art and science of feminine care with premium Nirena® intimate cleanser - a breakthrough that provides efficacy and results inadequately addressed by other commercially available products, which use cheap detergents, harsh chemicals, and low pH tolerances.

Nirena® has a precisely set pH carefully tested and tracked on every batch to protect vaginal flora integrity. In addition, Nirena® contains exclusive and totally natural compounds (with extensive clinical and scientific evidence) which have proven antibacterial, anticandidal, antifungal, and anti-inflammatory properties. These ingredients have never been used in any commercially available product.

It took two years of development for Nirena® to reach maturity. A dozen experienced researchers, designers, and producers collaborating around the world developed the perfect synthesis of state-of-the-art technology and precision.

Beginning with your very first use, it is an exceptional experience to treat yourself to Nirena®, as it is for us to make it.
