Oligo.DX cellulite reducing gel with nanosome technology

You have tried virtually everything to get rid of cellulite and nothing works.
Why?

Cellulite occurs in the deepest subcutaneous skin layer where other creams cannot effectively reach this area. Oligo DX® is the only formulation that uses an advanced delivery vehicle called nanosomes to insure absorption of clinically proven compounds into the deepest layers of the skin – where cellulite actually forms. Oligo DX® is a true breakthrough in modern biotechnology and is the one and only effective formulation for the treatment of cellulite and localized fat.

* Women using Oligo.DX® may experience increased urination during treatment.

** You should avoid the use of all moisturizers and moisturizing soaps during your treatment with Oligo DX®.

Available at select GNC stores
