

Performance.

You have tried virtually everything to get rid of cellulite and nothing works. **Why?**

Oligo.DX<sup>®</sup>, a pharmaceutical-grade cellulite gel, penetrates the deepest layers of skin to perform where conventional creams cannot. To reduce unsightly dimples of fat, ingredients must reach down where the cellulite actually forms. But even the best compounds, such as caffeine, clinically proven to burn fat, and algae, proven to drain fat, have zero effectiveness if they cannot reach the target site of treatment.

Only Oligo.DX<sup>®</sup> actually delivers smoother skin, because the ingredients in this high-tech super-concentrated gel come encapsulated in organic micro-spheres called nanosomes, a proprietary technology of DS Laboratories.

Oligo.DX<sup>®</sup> is a super concentrated gel that:

- Facilitates drainage for improved tissue structure.
- Blocks uptake of lipids (fat) into adipocytes (fat cells).
- Dissolves nodules of cellulite without massage.
- Detoxifies skin for improved overall health.
- Rivals micro-injection therapy for effectiveness.
