

Oligo.DX[®] cellulite reducing gel with nanosome technology

LABORATORIES

Performance.

You have tried virtually everything to get rid of cellulite and nothing works. **Why?**

No matter what the ingredients are in your favorite over-the-counter cellulite cream or how sophisticated the formula, it won't have any effect on cellulite if these ingredients cannot reach the subcutaneous skin layer, where cellulite occurs. Oligo.DX[®] is different and simply without equal in the marketplace. All of the active compounds in Oligo.DX[®] are encapsulated in Nanosomes, organic micros-spheres that are 200 times smaller than human cells. Nanosomes merge with cellular membranes and penetrate into the deepest layers of the skin to release their active payload.

Oligo.DX[®] is a super concentrated gel that:

- Facilitates drainage and water evacuation for improved tissue structure.
- Using biomimetic action it blocks entry of lipids into adipocytes (cells that specialize in storing energy as fat).
- Dissolves nodules of cellulite and localized fat without the need for massage.
- Has a cleansing and detoxifying effect, improving over-all skin health.
- Nanosome technology allows similar effectiveness to micro-injection therapy.

Oligo.DX[®] is a true breakthrough in modern biotechnology and is the one and only effective formulation for the treatment of cellulite and localized fat.

* Women using Oligo.DX[®] may experience increased urination during treatment. ** You should avoid the use of all moisturizers and moisturizing soaps during your treatment with Oligo.DX[®].
